KYMBERLY HOBBS, ADMIN vs ANTHONY R. KELLY, ET AL.
GOODMAN, MD, ELI on 09/11/2024

79

1 on his back for a while after he passed away. And it
2 gets that pinkish color because he's been
3 refrigerated for a significant period of time. It
4 takes on sort of a pinker hue.

5 Q That process, does that have any effect on
6 any, like, contusions in the area?

7 A Sometimes you can see them better when
8 it's -- when lividity is in that area, but not
9 necessarily.

10 Q Okay. And is there anything of note -- you
11 know, it's not just a solid pink area; right? We've
12 got some like striations, some white lines?

13 A Yeah.

14 Q Is that typical in this lividity process?

15 A Well, I mean, it's indicative that
16 something -- the places where there's no lividity is
17 indicative of the skin being pressed against, like, a
18 bed or the floor or something like that. So the
19 blood is not able to pool in areas that are in
20 contact with the ground and make -- and pressing
21 against the ground. There's no room in the blood
22 vessels for the blood to pool there so you have
23 what's called sparing of lividity in areas that are
24 in contact with the ground, with a surface.

25 Q Can that be caused by a body bag?
